Informacje o atlasie

Strony z wykresami miesięcznymi przedstawiają obiekty przypisane do wariantów na dany miesiąc. Prezentowana jest noc nowiu. Dlatego nie każdy obiekt na tych wykresach spełnia warunek minimalnego okna obserwacji. Należy odszukać go na stronie jemu poświęconej i tam sprawdzić, która noc w danym miesiącu pozwala wykorzystać okno obserwacji.

Dane typu: RA, Dec, size, mag są wynikiem automatycznego agregowania wielu obiektów z kadru. Dlatego mogą się nieco różnić od tego, co znajdziesz w innych atlasach. Różnica jednak nie powinna być znacząca.

Nazwa obiektu i nazwa zwyczajowa to również efekt łączenia różnych rekordów z katalogów astronomicznych. Dlatego ich wzajemna adekwatność może czasem być umowna. Ale obiekt opisany przez jedną lub drugą nazwę z pewnością jest w kadrze.

Indeksy to obiekty, których wpisy zostały połączone w tym kadrze. Ich liczba jest zmienna, a tu została ograniczona do pierwszych 24. Ich kolejność odzwierciedla popularność katalogu. Stąd najpierw są NGC, IC, Sh2, a później pozostałe.

Wszelkie sugestie zmian i poprawek mile widziane.
